

USI iPhone Exchange Server Setup

This guide will illustrate steps for setting up your iPhone to utilize the USI Exchange Server ActiveSync technology. ActiveSync will wirelessly sync your Exchange email, calendar, and contact list. i.e. If you make a change (add calendar event for example) on your iPhone, it will automatically and instantly sync that change to your desktop PC, and vice versa. This technology also allows the use of the USI outgoing email server while on Wi-Fi or cell phone networks. To sync music, movies, bookmarks, etc. you will still need a wired connection to a Mac/PC and the latest iTunes software.

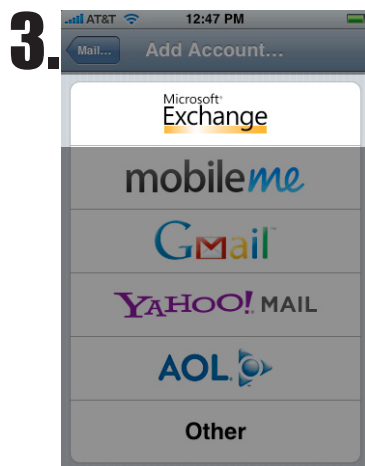

Delete any USI IMAP email accounts before proceeding.

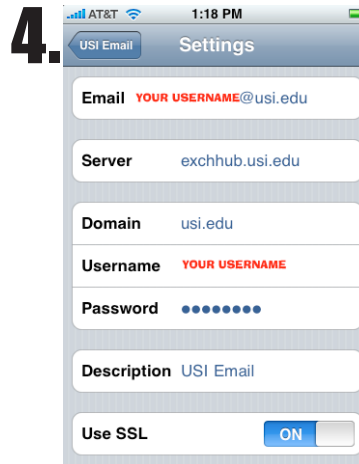

1. Go to: Settings > Mail, Contacts, Calendars. **NOTE:** You also want to turn on “Push” under Fetch New Data which is essentially instantaneous sync. This does negatively affect battery life.

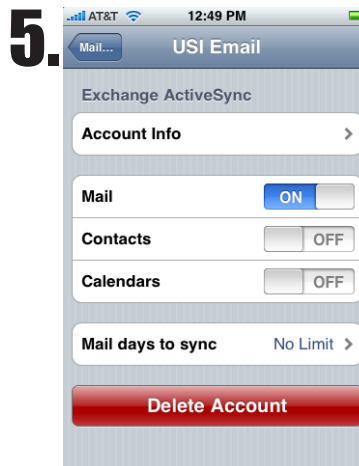

2. Select “Add Account”

3. Select “Microsoft Exchange”

4. Enter your email address, domain, username, and password then select Next to verify your account. Now enter the Server “exchhub.usi.edu” as shown.

5. You can now select what you would like to sync. **NOTE:** If you turn on Contacts or Calendars it will erase your local iPhone data and replace it with data from the Exchange server. **NOTE:** Select “No Limit” to retrieve ALL your old mail on the server.
